

The background of the slide is an abstract composition. It features a series of thick, dark, wavy lines that sweep across the frame from the top left towards the bottom right. These lines are layered over a light gray background that contains a grid of faint, semi-transparent numbers (0-9) scattered across it. The overall aesthetic is modern and data-oriented.

Regerssion

Linear regression

- $Y=a+bX$

$$a = \frac{(\sum Y)(\sum X^2) - (\sum X)(\sum XY)}{n(\sum x^2) - (\sum x)^2}$$

$$b = \frac{n(\sum XY) - (\sum X)(\sum Y)}{n(\sum x^2) - (\sum x)^2}$$

Solved Example

x	2	4	6	8
y	3	7	5	10

Eq.

$$y = 1.5 + 0.95x$$

x	y	x ²	xy
2	3	4	6
4	7	16	28
6	5	36	30
8	10	64	80
Σx = 20	Σy = 25	Σx ² = 120	Σxy = 144

$$a = \frac{(\sum Y)(\sum X^2) - (\sum X)(\sum XY)}{n(\sum x^2) - (\sum x)^2}$$

Now put the values in the equation

$$a = \frac{25 \times 120 - 20 \times 144}{4 \times 120 - 400}$$

$$a = \frac{120}{80}$$

$$a = 1.5$$

$$b = \frac{n(\sum XY) - (\sum X)(\sum Y)}{n(\sum x^2) - (\sum x)^2}$$

Put the values in the equation

$$b = \frac{4 \times 144 - 20 \times 25}{4 \times 120 - 400}$$

$$b = \frac{76}{80}$$

$$b = 0.95$$

Sales example

Month	Advertising	Sales
Jan	40937	502729
Feb	42376	507553
Mar	43355	516885
Apr	44126	528347
May	45060	537298

Nov	62356	573764
Dec	63246	582746

Sales

Online Store	Monthly E- Commerce Sales (in 1000 s)	Online Advertising Dollars (1000 s)
1	368	1.7
2	340	1.5
3	665	2.8
4	954	5
5	331	1.3
6	556	2.2
7	376	1.3

Example :

You have to study the relationship between the monthly e-commerce sales and the online advertising costs. You have the survey results for 7 online stores for the last year.

Your task is to find the equation of the straight line that fits the data best.

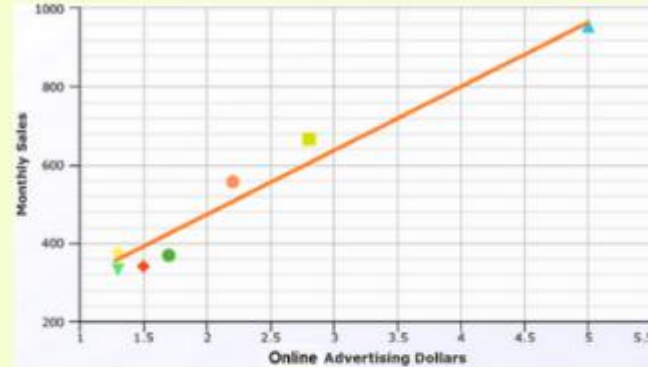

The table on the left represents the survey results from the 7 online stores.

We can see that there is a **positive relationship** between the monthly e-commerce sales (Y) and online advertising costs (X).

$$Y = 125.8 + 171.5 * X$$

The regression line shows the predicted score on e-commerce sales for each possible value of the online advertising costs.

Scatter diagram
With The Regression Line:

Note: You can find easily the values for B_0 and B_1 with the help of paid or free statistical software, online linear regression calculators or Excel.

Interpretation of the results:

The formula estimates that for each increase of 1 dollar in online advertising costs, the expected monthly e-commerce sales are predicted to increase by \$171.5.
